BARRIER STAND FEATURES

- Our Foldable Barrier Stand is the latest design and technology using engineering plastics to replace metal, with features designed to save on floor space, transporting needs, handling, looks and safety.

- Constructed from Nylon Glass Filled, The barrier stands are highly durable, will not rust, and are colour fast, meaning they can be moulded in any colour to suit the occasion. (no more rusting or fading)

- The folding system is designed to give users greater ability to place stands vertically or horizontally in narrow spaces like loaded vehicles or to stack large numbers on shelves or pallets.

- Stands can accommodate signage to fit over top spigot or a lantern to be locked in place.

- Each stand folds down to 1125mm x 85mm x 25mm.

- Triangulated bracing maximises strength and minimises mass. Each stand weighs only 1.31 kg.
